Unit-2

Business Analysis: Planning, Collaboration and Life Cycle Management

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach
b. Plan Stakeholder Engagement
c. Plan Business Analysis Governance
d. Plan Business Analysis Information Management
e. Identify Business Analysis Performance Improvements

2. Elicitation and Collaboration

a. Prepare for Elicitation
b. Conduct Elicitation
c. Confirm Elicitation Results
d. Communicate Business Analysis Information
e. Manage Stakeholder Collaboration

3. Requirements Life Cycle Management

a. Trace Requirements
b. Maintain Requirements
c. Prioritize Requirements
d. Assess Requirements Changes
e. Approve Requirements

Unit-2

Business Analysis: Planning, Collaboration and Life Cycle Management

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach
b. Plan Stakeholder Engagement
c. Plan Business Analysis Governance
d. Plan Business Analysis Information Management
e. Identify Business Analysis Performance Improvements

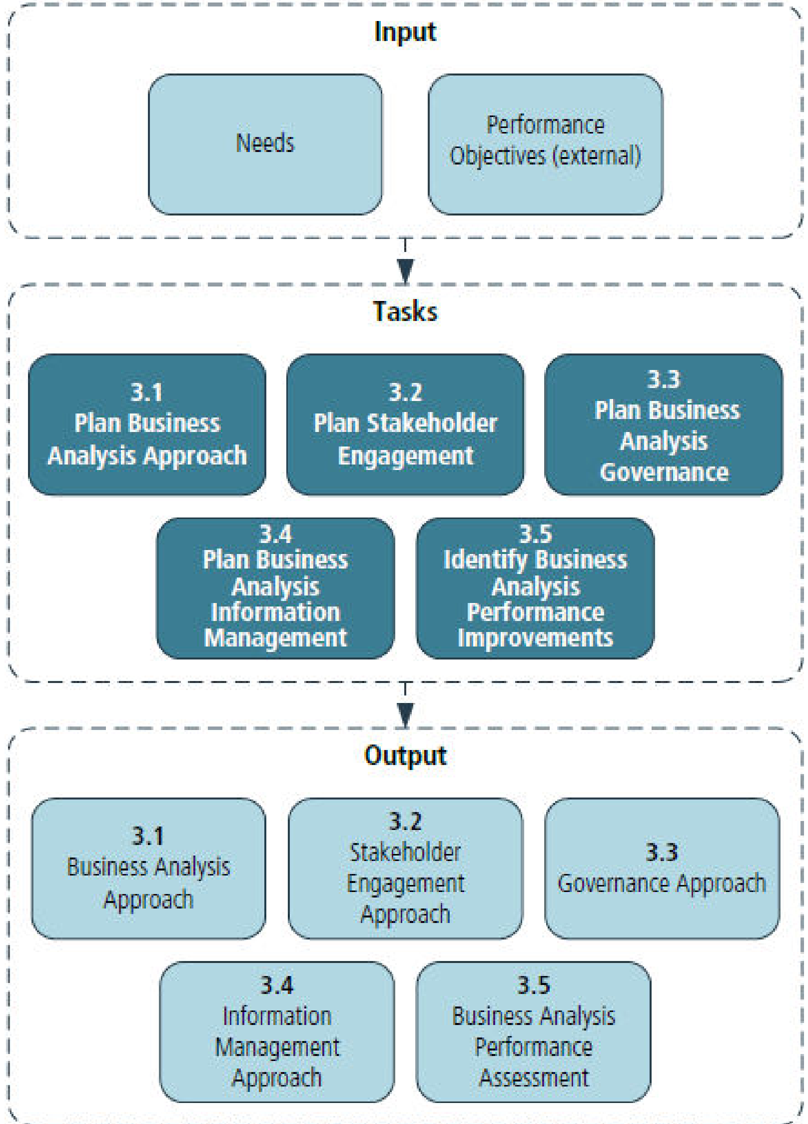
Unit-2

Topic-1: Planning Business Analysis Approach

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach

Figure 3.0.1: Business Analysis Planning and Monitoring Input/Output Diagram



The Business Analysis Planning and Monitoring knowledge area includes the following tasks:

Task	What It Means (Simplified)
1. Plan Business Analysis Approach	Choose the method and plan the BA tasks, activities, and deliverables.
2. Plan Stakeholder Engagement	Identify what BAs need from stakeholders, what stakeholders need from BAs, and how to engage.
3. Plan BA Governance	Define how decisions will be made, who approves what, and how BA risks and resources are managed.
4. Plan BA Information Management	Decide how BA info (like requirements) will be stored, shared, and maintained.
5. Identify BA performance Improvements	Monitor how BA work is done and find ways to improve it continuously.

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach

Business analysis approaches describe

- **the overall method** that will be followed when performing business analysis work on a given initiative,
- **how** and **when** tasks will be performed, and
- **the deliverables** that will be produced.

<u>This business analysis approach should:</u>

- **align to the overall goals** of the change,
- **coordinate the business analysis tasks with the activities and deliverables** of the overall change,
- include tasks **to manage any risks** that could reduce the quality of business analysis deliverables or **impede task efficiency,** and
- **leverage approaches** and select techniques and tools that have **historically worked well.**

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach

Planning Approaches

1. Plan Business Analysis Approach

    1. Predictive Approach
    2. Adaptive Approach

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach

	Approach	
	Predictive	**Adaptive**
Solution Definition	Defined before implementation to maximize control and minimize risk.	Defined in iterations to arrive at best solution or improve an existing solution.
Level of Formality	Formal—information is captured in standardized templates.	Informal—information is gathered through team interaction and feedback.
Activities	Activities required to complete deliverables are identified first and then divided into tasks.	Activities are divided into iterations with deliverables first and then the associated tasks are identified.
Timing	Tasks are performed in specific phases.	Tasks are performed iteratively.

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach

The **timing** of business analysis activities can also be affected by:

- the availability of resources,
- priority and/or urgency of the initiative,
- other concurrent initiatives, or
- constraints such as contract terms or regulatory deadlines.

The business analysis approach is reviewed and agreed upon by key stakeholders.

Unit-2

Business Analysis: Planning, Collaboration and Life Cycle Management

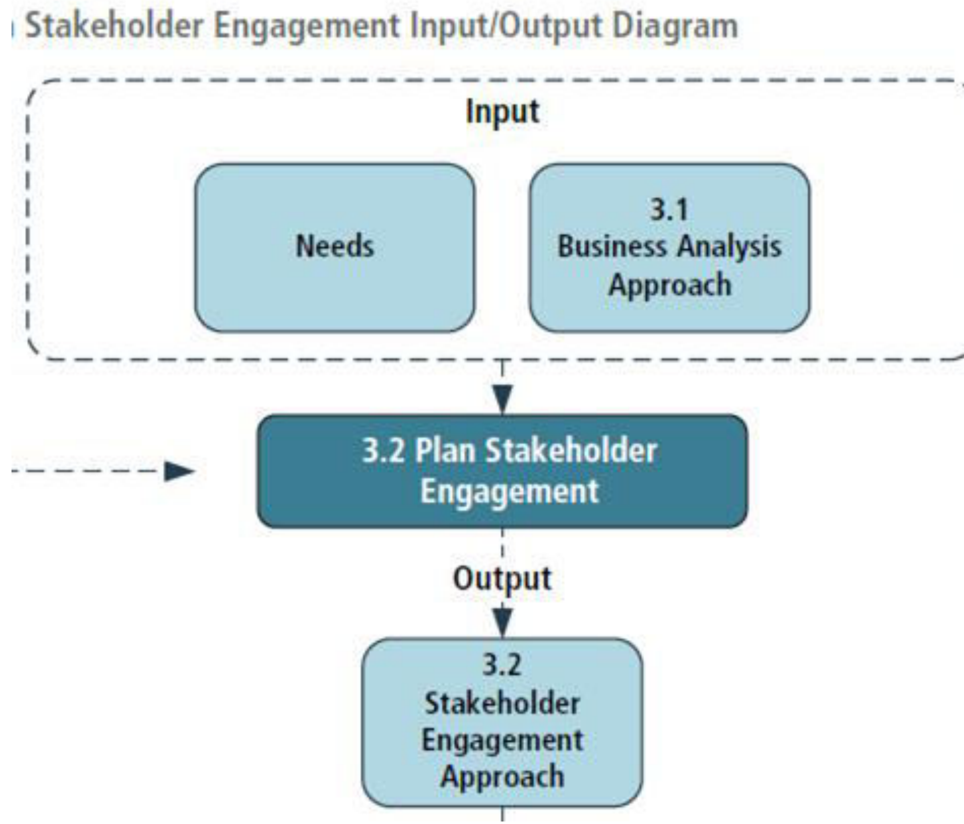
1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach
b. **Plan Stakeholder Engagement**
c. Plan Business Analysis Governance
d. Plan Business Analysis Information Management
e. Identify Business Analysis Performance Improvements

1. Business Analysis Planning and Monitoring

b. Plan Stakeholder Engagement

The purpose of Plan Stakeholder Engagement is to plan an approach for establishing and maintaining effective working relationships with the stakeholders.



1. Business Analysis Planning and Monitoring

b. Plan Stakeholder Engagement

Identifying Stakeholders

Imagine you are Building a College App. Stakeholders may include:

- Students
- Teachers
- Admin Team
- IT Staff

Sources to identify the stakeholders:

- A company's organizational chart,
- Sponsor may also identify stakeholders.
- Shareholders, customers, and suppliers are also considered when searching for external stakeholders

1. Business Analysis Planning and Monitoring

b. Plan Stakeholder Engagement

Business analysts connect stakeholders and the solution.

Tasks involved:

a. Identifying Stakeholders
b. Analyzing Stakeholder Characteristics
c. Determining Collaboration Strategies
d. Developing Communication Approaches
e. Planning for Stakeholder Risks

1. Business Analysis Planning and Monitoring

b. Plan Stakeholder Engagement

Analyzing Stakeholder Characteristics

- Business analysts identify stakeholder **roles** in order to understand where and how the stakeholders will contribute to the initiative.
- Business analysts analyze stakeholder **attitudes** about:
  - business goals, objectives of the initiative, and any proposed solutions,
  - business analysis in general,
  - the level of interest in the change,
  - the sponsor,
  - team members and other stakeholders, and
  - collaboration and a team-based approach.

1. Business Analysis Planning and Monitoring

b. Plan Stakeholder Engagement

Analyzing Stakeholder Characteristics

Decision Making Authority:

Business analysts identify the **authority level a stakeholder** possesses over

- business analysis activities,
- deliverables, and
- changes to business analysis work.

Level of Power or Influence:

- Understanding the **nature of influence** and the **influence structures and channels** can prove invaluable when seeking to build relationships and trust.
- Understanding the **influence and attitude** each stakeholder may have can help develop strategies.

1. Business Analysis Planning and Monitoring

b. Plan Stakeholder Engagement

Determining Collaboration Strategies

Effective collaboration with stakeholders is essential for maintaining their engagement in business analysis activities. Much collaboration is **deliberate** and **planned**, with specific activities and outcomes determined ahead of time during **planning activities**.

Some considerations when planning collaboration include:

- timing and frequency of collaboration,
- location,
- available **tools** such as wikis and online communities,
- **delivery method** such as in-person or virtual, and
- preferences of the stakeholders.

1. Business Analysis Planning and Monitoring

b. Plan Stakeholder Engagement

Developing Communication Approaches

The business analyst evaluates:

- what needs to be communicated,
- what is the appropriate delivery method (written or verbal),
- who the appropriate audience is,
- when communication should occur,
- frequency of communication,
- geographic location of stakeholders who will receive communications,
- level of detail appropriate for the communication and stakeholder, and
- level of formality of communications.

Unit-2

Business Analysis: Planning, Collaboration and Life Cycle Management

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach

b. Plan Stakeholder Engagement

c. Plan Business Analysis Governance

d. Plan Business Analysis Information Management

e. Identify Business Analysis Performance Improvements

1. Business Analysis Planning and Monitoring

C. Plan Business Analysis Governance

- Business analysts ensure that a governance process is in place and clarify any ambiguities within it.
- A governance process identifies
  - the decision makers,
  - process, and
  - information required for decisions to be made.
- A governance process describes how **approvals** and **prioritization decisions** are made for requirements and designs.

1. Business Analysis Planning and Monitoring

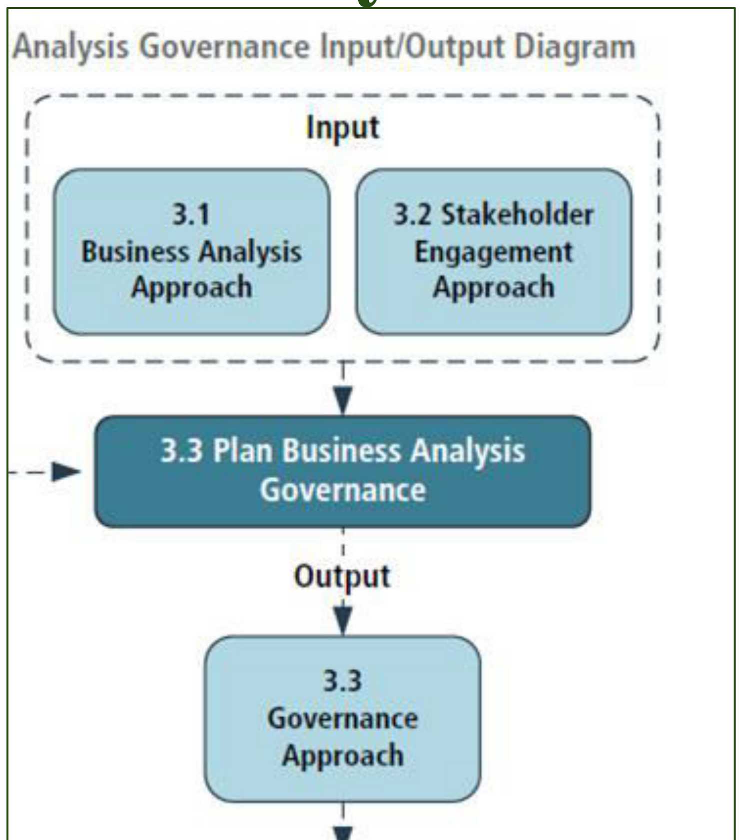
C. Plan Business Analysis Governance

When planning the governance approach, business analysts identify:

- how business analysis work will be **approached and prioritized**,
- **what the process for proposing a change** to business analysis information is,
- **who has the authority and responsibility** to propose changes and **who should be involved** in the change discussions,
- **who has responsibility** for analyzing change requests,
- **who has the authority** to approve changes, and
- **how** changes will be **documented** and **communicated.**

1. Business Analysis Planning and Monitoring

C. Plan Business Analysis Governance



1. Business Analysis Planning and Monitoring

C. Plan Business Analysis Governance

Key tasks:

1. Decision Making
2. Change Control Process
3. Plan Prioritization Approach
4. Plan for Approvals

1. Business Analysis Planning and Monitoring

C. Plan Business Analysis Governance

1. **Decision Making:**

Some key stakeholders holds final decision-making authority.

A stakeholder may serve in various roles in the decision-making process such as:

- **participant** in decision-making discussions,
- **subject matter expert** (SME) lending experience and knowledge to the decision-making process,
- **Reviewer** of information, and
- **approver** of decisions.

1. Business Analysis Planning and Monitoring

C. Plan Business Analysis Governance

Key tasks:

2. Change Control Process: This process details the **steps for proposing a change, when** changes can be proposed, **who** can propose changes and **how** change requests are communicated.

When business analysts develop a change control process, they:

- Determine the **process** for requesting changes
- Determine the **elements** of the change request
- Determine **how** changes will be **documented**
- Determine **how** changes will be **communicated**
- Determine **who** will perform the **impact analysis**
- Determine **who** will **authorize changes**

1. Business Analysis Planning and Monitoring

C. Plan Business Analysis Governance

Key tasks:

2. Change Control Process: Determine the elements of the change request:

  - Cost and time estimates
  - Benefits
  - Risks
  - Priority
  - Course(s) of action
- Determine how changes will be prioritized

1. Business Analysis Planning and Monitoring

C. Plan Business Analysis Governance

Key tasks:

3. Plan Prioritization Approach

- Timelines, expected value, dependencies, resource constraints, adopted methodologies, and other factors influence **how requirements and designs are prioritized.**
- The approach should also determine which stakeholders will have a role in prioritization.

4. Plan for Approvals: An approval formalizes the agreement between all stakeholders that the content and presentation of the requirements and designs are accurate, adequate, and contain sufficient detail to allow for continued progress to be made.

Unit-2

Business Analysis: Planning, Collaboration and Life Cycle Management

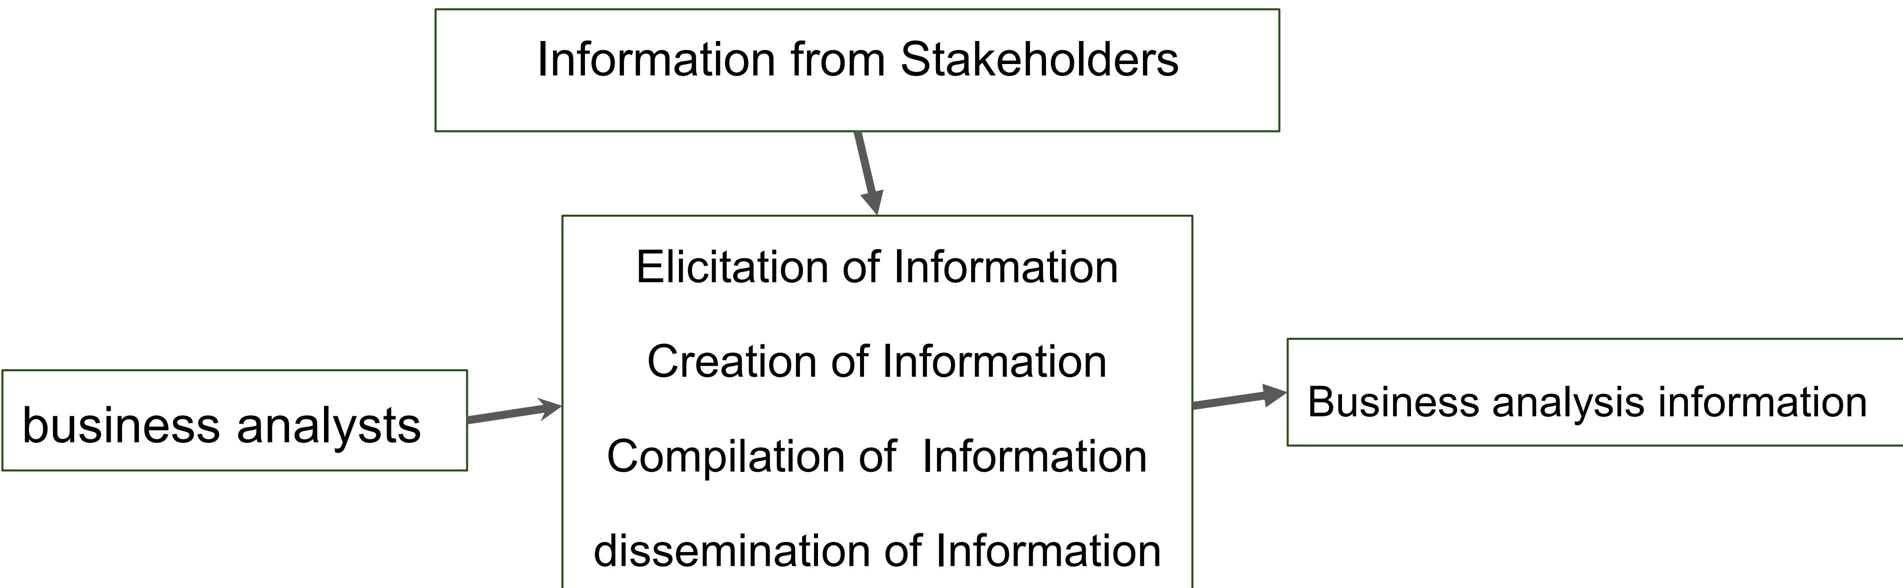
1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach
b. Plan Stakeholder Engagement
c. Plan Business Analysis Governance
d. **Plan Business Analysis Information Management**
e. Identify Business Analysis Performance Improvements

1. Business Analysis Planning and Monitoring

D. Plan Business Analysis Information Management

It is to develop an approach for how **business analysis information** will be **stored** and **accessed.**



1. Business Analysis Planning and Monitoring

D. Plan Business Analysis Information Management

business analysts

Elicitation of Information

Creation of Information

Compilation of Information

dissemination Information

Business analysis information

Models,

scope statements,

stakeholder concerns,

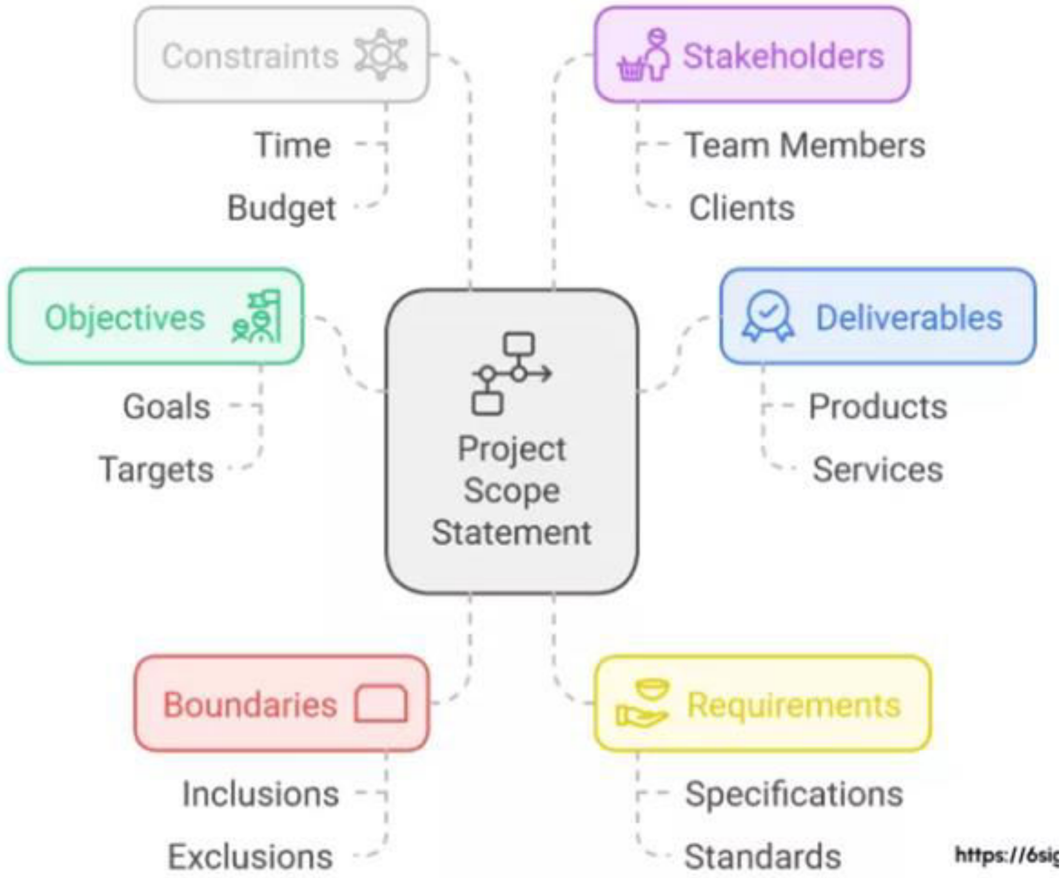
elicitation results,

requirements, designs, and

solution options.

1. Business Analysis Planning and Monitoring

D. Plan Business Analysis Information Management



1. Business Analysis Planning and Monitoring

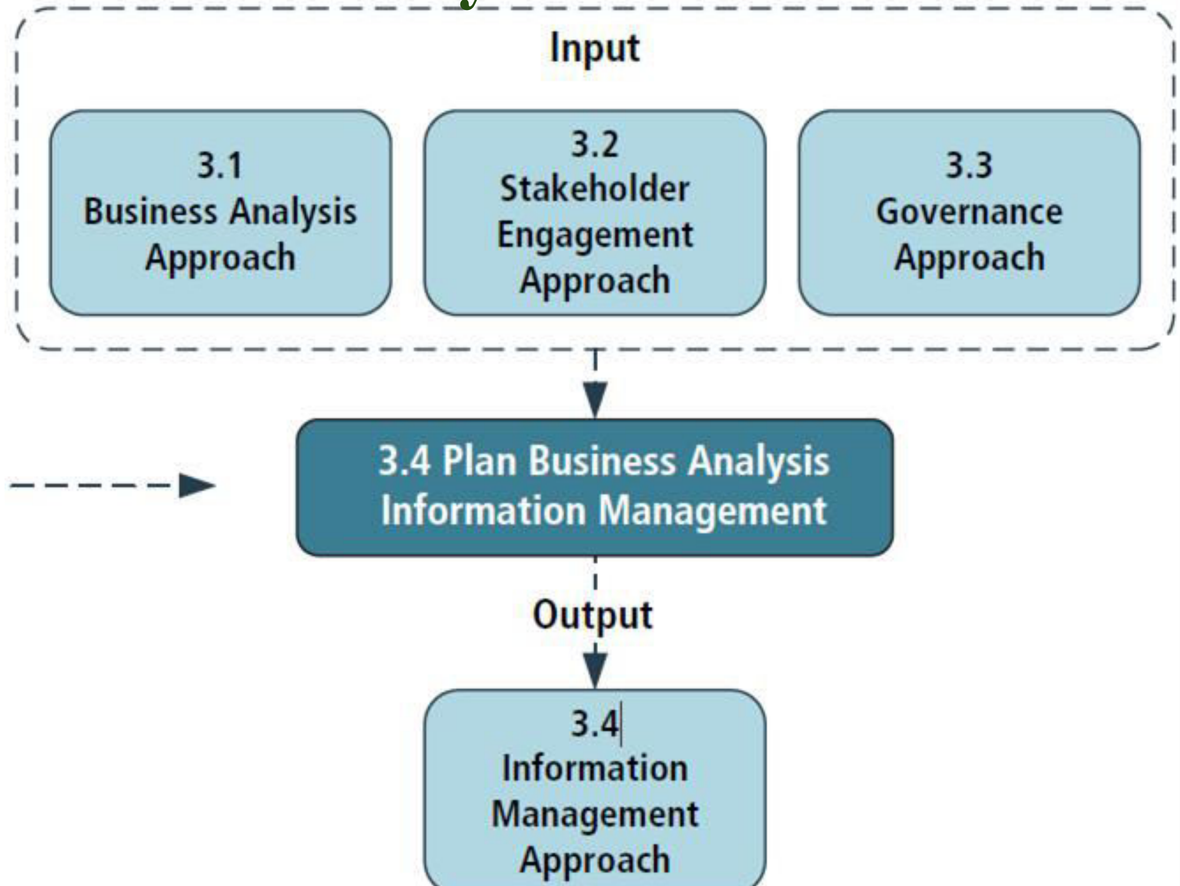
D. Plan Business Analysis Information Management

Information management involves identifying:

- how information should be organized,
- the level of detail at which information should be captured,
- any relationships between the information,
- how information may be used across multiple initiatives and throughout the enterprise,
- how information should be accessed and stored, and
- characteristics about the information that must be maintained.

1. Business Analysis Planning and Monitoring

D. Plan Business Analysis Information Management



1. Business Analysis Planning and Monitoring

D. Plan Business Analysis Information Management

Factor	What It Means
Type & Amount of Information	Will it be diagrams, documents, user stories, spreadsheets? How much of it?
Stakeholder Needs	Who needs to access this info? How will they use it?
Size & Complexity of the Change	Is this a small update or a large transformation? More complexity needs better structure.
Relationships Between Information	How does one piece of information connect to another? E.g., a change in one requirement may impact others.

1. Business Analysis Planning and Monitoring

D. Plan Business Analysis Information Management

Techniques:

- Brainstorming
- Interviews
- Item Tracking
- Lessons Learned
- Mind Mapping
- Process Modelling
- Survey or Questionnaire
- Workshops

1. Business Analysis Planning and Monitoring

E. Identify Business Analysis Performance Improvements

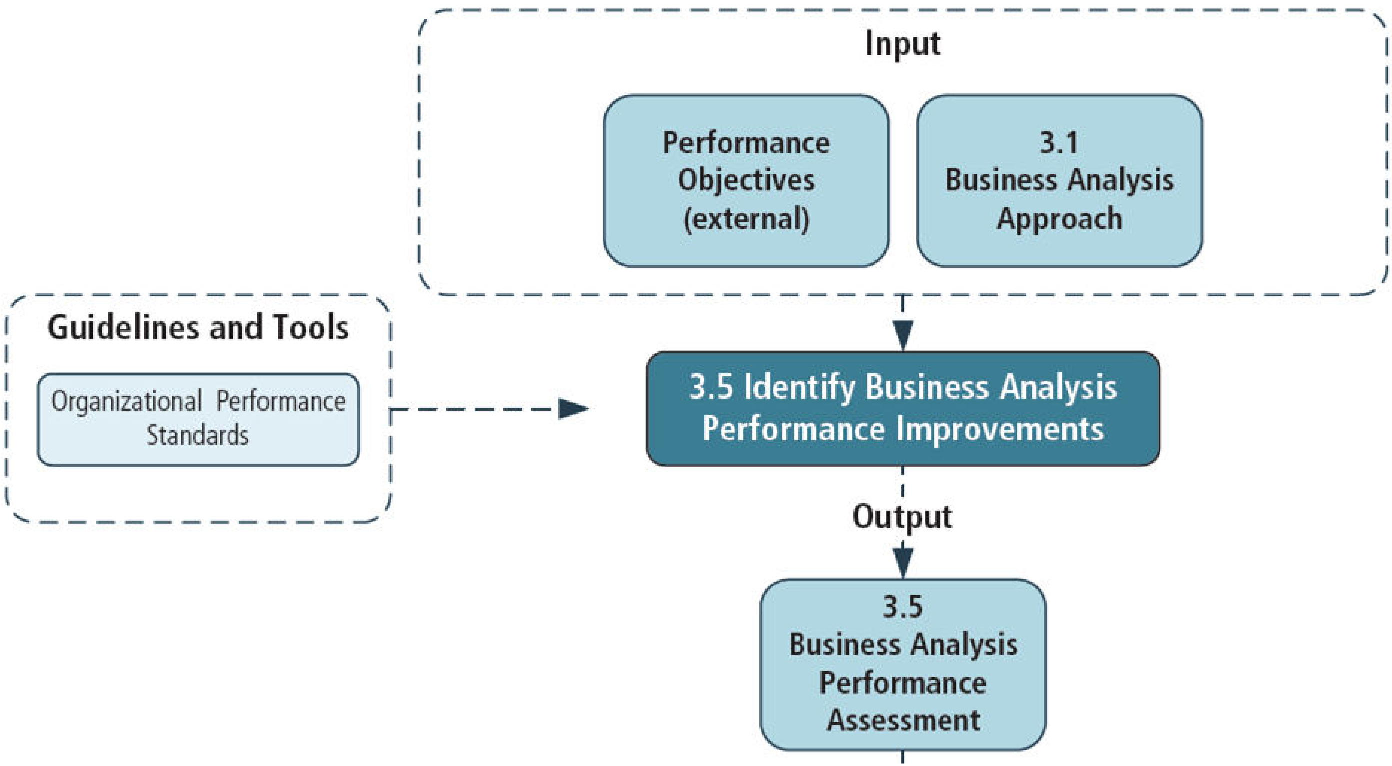
Purpose:
To assess business analysis work and to plan to improve processes where required.

To monitor and improve performance, it is necessary to

- establish the **performance measures**,
- conduct the **performance analysis**,
- report on the **results of the analysis**, and
- identify any necessary preventive, corrective, or developmental **actions**.

1. Business Analysis Planning and Monitoring

E. Identify Business Analysis Performance Improvements



1. Business Analysis Planning and Monitoring

E. Identify Business Analysis Performance Improvements

Some Performance Measures

- Accuracy and Completeness (The work of business analyst is correct and relevant or whether ongoing revisions were needed to gain acceptance by stakeholders.)
- Knowledge (skills and experience of the Business Analyst)
- Effectiveness (clarity and usability of work products)
- Organizational Support (availability of resources)
- Significance (value vs. cost/time/effort)
- Strategic Alignment (did it meet business goals?)
- Timeliness (was it delivered on time?)

The business analysis process and deliverables are compared against the set of defined measures.

1. Business Analysis Planning and Monitoring

E. Identify Business Analysis Performance Improvements

Recommend Actions for Improvement:

1. **Preventive:** reduces the probability of an event with a negative impact.
2. **Corrective:** establishes ways to reduce the negative impact of an event.
3. **Improvement:** establishes ways to increase the probability or impact of events with a positive impact.

Unit-2

Business Analysis: Planning, Collaboration and Life Cycle Management

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach
b. Plan Stakeholder Engagement
c. Plan Business Analysis Governance
d. Plan Business Analysis Information Management
e. Identify Business Analysis Performance Improvements

2. Elicitation and Collaboration

a. Prepare for Elicitation
b. Conduct Elicitation
c. Confirm Elicitation Results
d. Communicate Business Analysis Information
e. Manage Stakeholder Collaboration

3. Requirements Life Cycle Management

a. Trace Requirements
b. Maintain Requirements
c. Prioritize Requirements
d. Assess Requirements Changes
e. Approve Requirements

Unit-2

Business Analysis: Planning, Collaboration and Life Cycle Management

2. Elicitation and Collaboration

a. Prepare for Elicitation
b. Conduct Elicitation
c. Confirm Elicitation Results
d. Communicate Business Analysis Information
e. Manage Stakeholder Collaboration

2. Elicitation and Collaboration

Elicitation is the drawing forth or receiving of information from stakeholders or other sources.

Elicitation might involve

- talking with stakeholders directly,
- researching topics, experimenting, or
- simply being handed information.

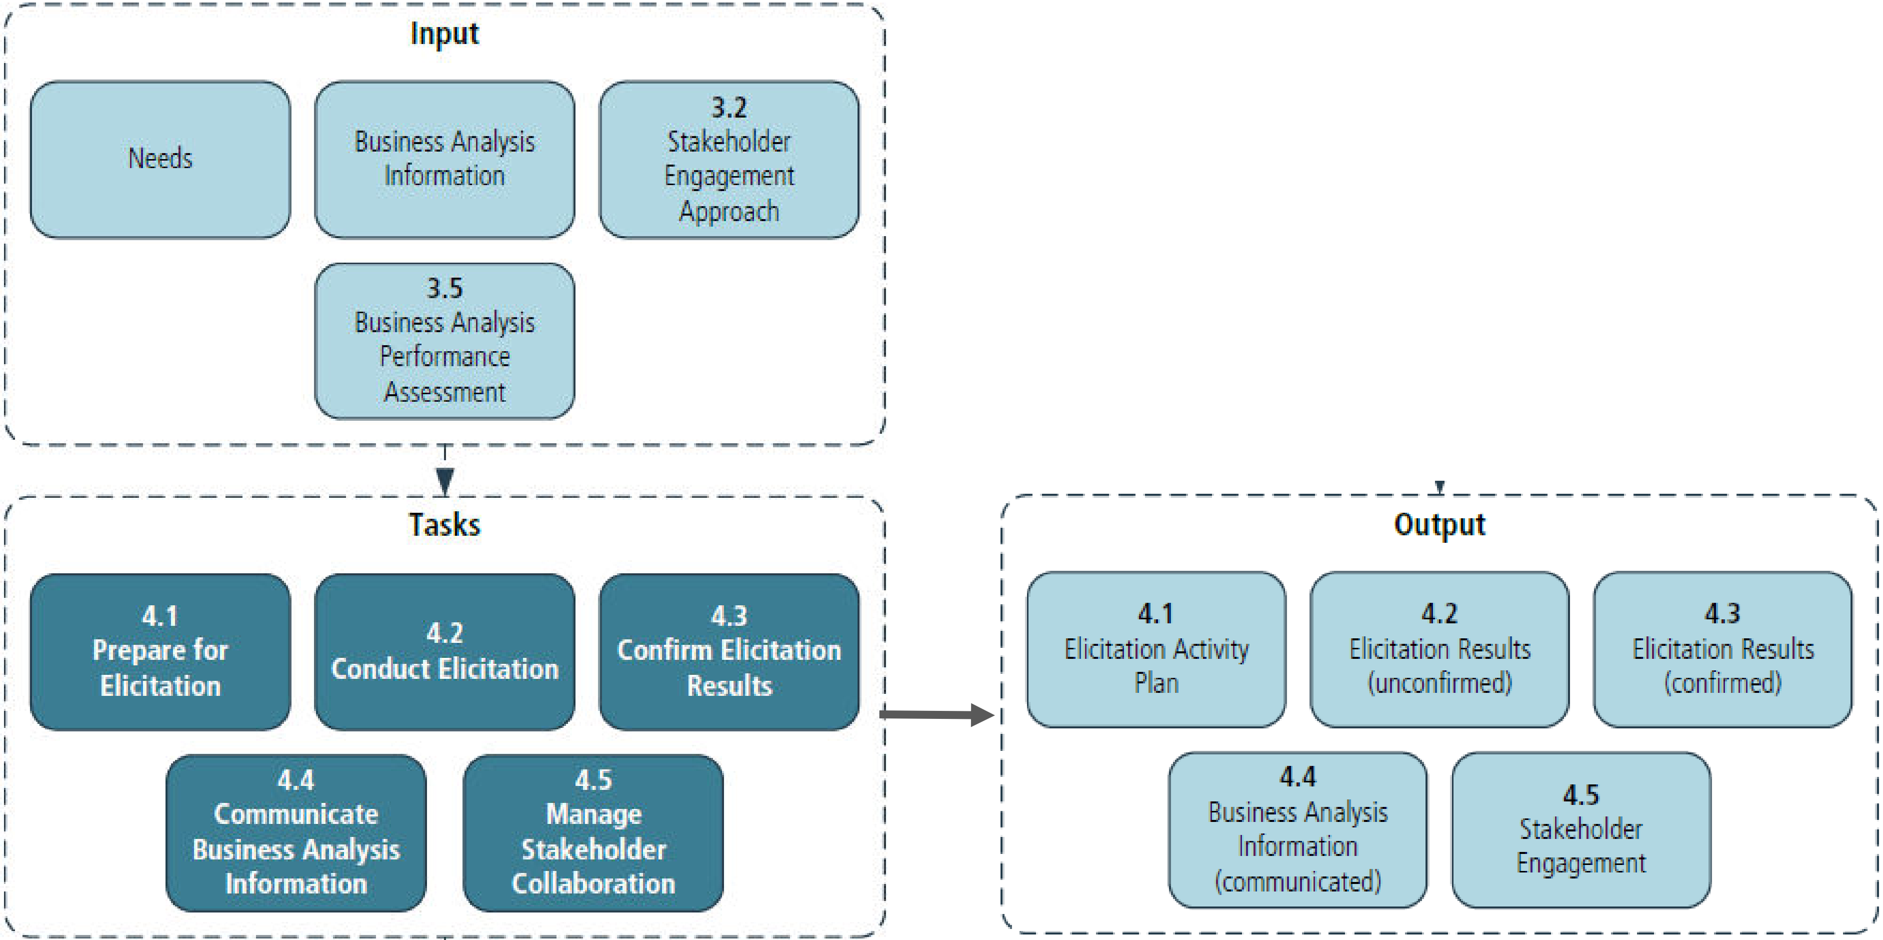
discovering

Requirements and design Information of stakeholders

2. Elicitation and Collaboration

- **Collaboration** is the act of two or more people working together towards a common goal.
- The Elicitation and Collaboration knowledge area describes how business analysts identify and reach agreement on the mutual understanding of all types of business analysis information.
- Elicitation and collaboration work is never a 'phase' in business analysis; rather, it is ongoing as long as business analysis work is occurring.

2. Elicitation and Collaboration Input/Output Diagram



2. Elicitation and Collaboration

Key Tasks	Description
Prepare for Elicitation	Ensure stakeholders have the needed information and understand the activities. Prepare sources or experiments.
Conduct Elicitation	Understand stakeholder needs and identify potential solutions through interaction, research, or experiments.
Confirm Elicitation Results	Ensure shared understanding, accurate records, and complete information. Check for inconsistencies or gaps.
Communicate Business Analysis Information	Provide information in a useful format using correct terminology and timing.
Manage Stakeholder Collaboration	Engage stakeholders in the BA process and support delivery of needed outcomes.

2. Elicitation and Collaboration

a. Prepare for Elicitation

Defining the Desired Outcomes, considering the stakeholders involved and the goals of the initiative

- What are you trying to achieve?
- Who's involved? What are their roles and expectations?
- Make sure elicitation supports the broader business goals.

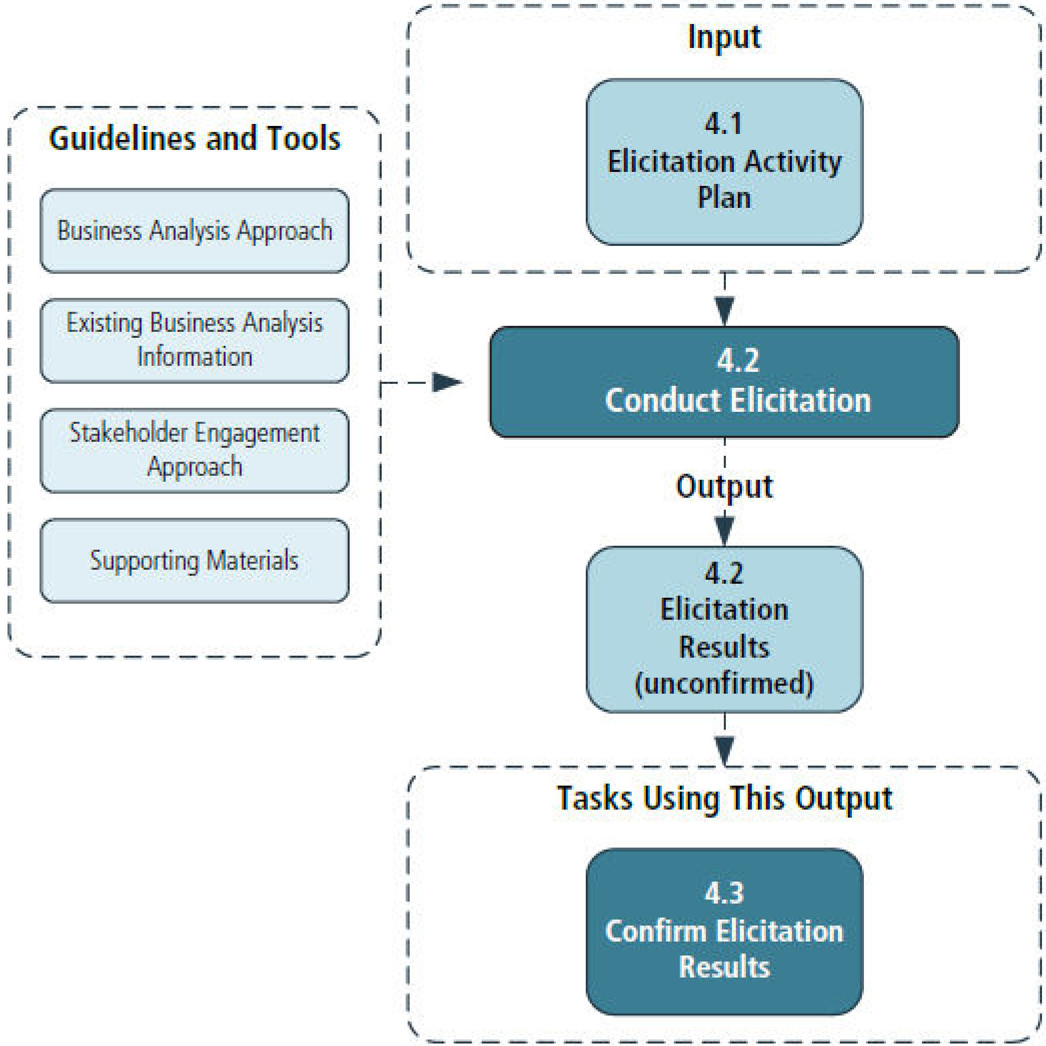
<u>It includes:</u>

Identifying Work Products using elicitation results? (e.g., user stories, models)
Deciding which techniques are best suited to produce those results, (e.g., interviews, workshops, observations).
Establishing Logistics(Set time, place, tools, and platforms for the session.)
Identifying any Supporting Materials Needed (Bring any documents, templates, or reference content needed.)
Understanding circumstances to foster collaboration during an elicitation activity.

Conduct Elicitation

The purpose of Conduct Elicitation is to draw out, explore, and identify information relevant to the change.

Figure 4.2.1: Conduct Elicitation Input/Output Diagram



2. Elicitation and Collaboration

B. Conduct Elicitation

There are three common types of elicitation:

- **Collaborative:** involves **direct interaction with stakeholders,** and relies on their experiences, expertise, and judgment.
- **Research:** involves **systematically discovering and studying information** from materials or **sources that are not directly known by stakeholders** involved in the change. Research can include data analysis of historical data to identify trends or past results.
- **Experiments:** involves identifying information that could not be known without some sort of controlled test. Some information cannot be drawn from people or documents—because it is unknown. Experiments can help discover this kind of information. Experiments include **observational studies, proofs of concept, and prototypes.**

One or more elicitation techniques may be used to produce the desired outcome within the scope of elicitation.

2. Elicitation and Collaboration

C. Confirm Elicitation Results

The purpose of Confirm Elicitation Results is to check the information gathered during an elicitation session for **accuracy** and **consistency** with other information.

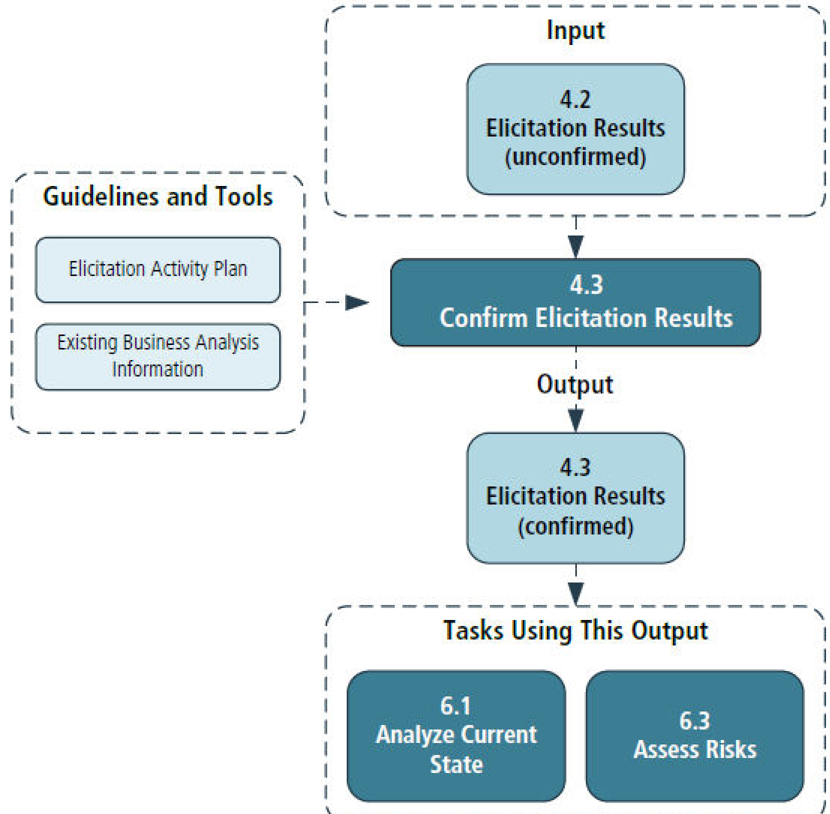
Confirming the Elicited information:

- **Discovering any problems** (errors, omissions, conflicts, and ambiguity) in Elicited information.
- The elicitation results can be **compared against their source** and other elicitation results to **ensure consistency.**
- **Collaboration** with stakeholders might be necessary to ensure **their inputs are correctly captured** and that **they agree with the results of non-facilitated elicitation**. If information is not correct, the business analyst determines what is correct, which can require more elicitation.

To resolve the problems **before resources are committed** to using the information.

Confirm Elicitation Results

Figure 4.3.1: Confirm Elicitation Results

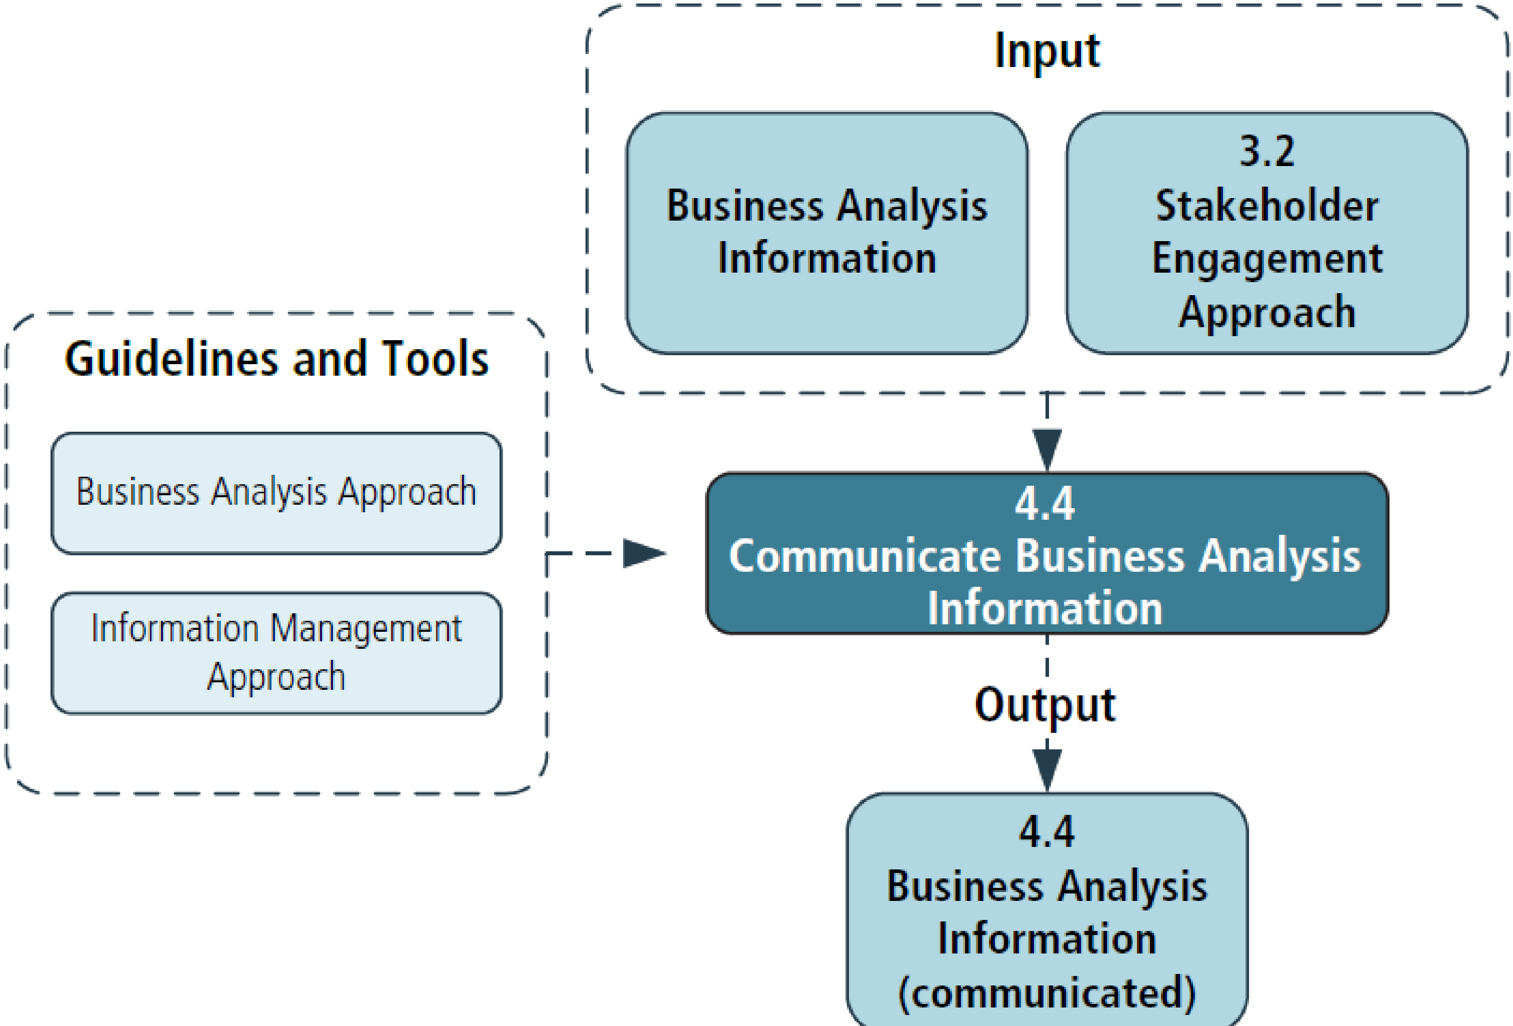


2. Elicitation and Collaboration

D. Communicate Business Analysis Information

- The purpose of Communicate Business Analysis Information is to ensure stakeholders have a shared understanding of business analysis information.
- Business analysts must communicate appropriate information to stakeholders at the right time and in formats that meet their needs.
- Communication of business analysis information is bi-directional and iterative
- Communicating information does not simply involve pushing information out and assuming it was received and understood. Business analysts engage stakeholders to ensure they understand the information and gain agreement.
- The business analyst acts on any disagreements.

Figure 4.4.1: Communicate Business Analysis Information Input/Output Diagram



2. Elicitation and Collaboration

D. Communicate Business Analysis Information

Business analysis information packages may be prepared;
Possible forms for packages may include:

• **Formal Documentation:** is usually based on a template used by the organization and may include text, matrices, or diagrams. It provides a stable, easy to use, long-term record of the information.

• **Informal Documentation:** may include text, diagrams, or matrices that are used during a change but are not part of a formal organizational process.

• **Presentations:** deliver a high-level overview appropriate for understanding goals of a change, functions of a solution, or information to support decision making.

Selecting the appropriate communication platform is also important. Common communication platforms include:

- Group collaboration
- Individual collaboration
- E-mail or other non-verbal methods

2. Elicitation and Collaboration

E. Manage Stakeholder Collaboration

- The purpose of Manage Stakeholder Collaboration is to encourage stakeholders to work towards a common goal.
- Identification of stakeholders, Determining their role, influence, and relationship to the Initiative.
- Business analysts manage stakeholder collaboration to capitalize on positive reactions, and mitigate or avoid negative reactions. The business analyst should constantly monitor and assess each stakeholder’s attitude to determine if it might affect their involvement in the business analysis activities.

2. Elicitation and Collaboration

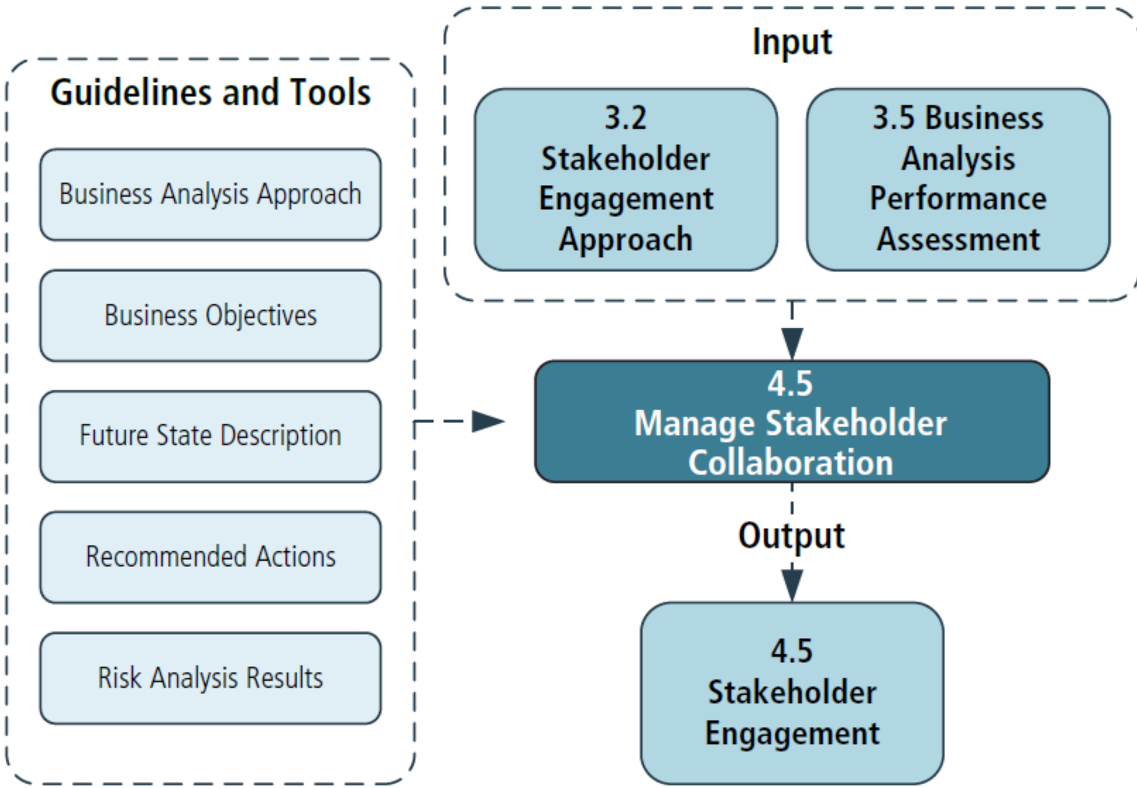
E. Manage Stakeholder Collaboration

Gain Agreement on Commitments: Stakeholders participate in business analysis activities that may require time and resource commitments. The business analyst and stakeholders identify and agree upon these commitments as early in the initiative as possible.

Monitor Stakeholder Engagement: Business analysts monitor the participation and performance of stakeholders

4.5 Manage Stakeholder Collaboration

Figure 4.5.1: Manage Stakeholder Collaboration Input/Output Diagram



Unit-2

Business Analysis: Planning, Collaboration and Life Cycle Management

1. Business Analysis Planning and Monitoring

a. Plan Business Analysis Approach
b. Plan Stakeholder Engagement
c. Plan Business Analysis Governance
d. Plan Business Analysis Information Management
e. Identify Business Analysis Performance Improvements

2. Elicitation and Collaboration

a. Prepare for Elicitation
b. Conduct Elicitation
c. Confirm Elicitation Results
d. Communicate Business Analysis Information
e. Manage Stakeholder Collaboration

3. Requirements Life Cycle Management

a. Trace Requirements
b. Maintain Requirements
c. Prioritize Requirements
d. Assess Requirements Changes
e. Approve Requirements

3. Requirements Life Cycle Management

a. Trace Requirements
b. Maintain Requirements
c. Prioritize Requirements
d. Assess Requirements Changes
e. Approve Requirements

3. Requirements Life Cycle Management

The Requirements Life Cycle Management knowledge area describes the tasks that business analysts perform in **order to manage and maintain requirements and design information from inception to retirement**.

- Tasks Included:
    - establishing meaningful relationships between related requirements and designs
    - assessing changes to requirements and designs when changes are proposed, and
    - analyzing and gaining consensus on changes.

- The purpose of requirements life cycle management is to ensure that business, stakeholder, and solution requirements and designs are aligned to one another and that the solution implements them.

3. Requirements Life Cycle Management

- Requirements are focused on the need; designs are focused on the solution.
- The distinction between requirements and designs is not always clear.
- A requirement leads to a design which in turn may drive the discovery and analysis of more requirements.

Requirement	Design
View six months sales data across multiple organizational units in a single view.	A sketch of a dashboard.
Reduce amount of time required to pick and pack a customer order.	Process model.

3. Requirements Life Cycle Management

Life cycle refers to the existence of various phases or states that requirements pass through as part of any change. Requirements may be in multiple states at one time.

The requirements life cycle:

- begins with the representation of a business need as a requirement,
- continues through the development of a solution, and
- ends when a solution and the requirements that represent it are retired.

The management of requirements does not end once a solution is implemented. Throughout the life of a solution, requirements continue to provide value when they are managed appropriately.

3. Requirements Life Cycle Management

a. Trace Requirements

Requirements Traceability

Requirements traceability means tracking each **requirement's origin** and how it connects to other parts of the solution.
It includes:

- **Backward traceability** (where it came from)
- **Forward traceability** (where it leads to)
- **Relationships** to other requirements

Why Traceability Is Important:

- Ensures the **solution matches the requirements**
- Supports **scope, change, risk, time, cost, and communication management**
- Helps find **missing or extra functionality**

3. Requirements Life Cycle Management

a. Trace Requirements

Requirements Traceability

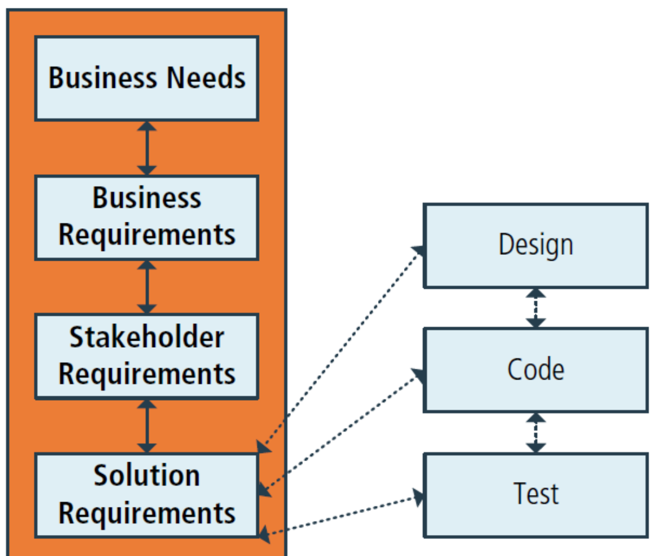
Traceability enables:

- faster and simpler impact analysis,
- more reliable discovery of inconsistencies and gaps in requirements,
- deeper insights into the scope and complexity of a change, and
- reliable assessment of which requirements have been addressed and which have not.

3. Requirements Life Cycle Management

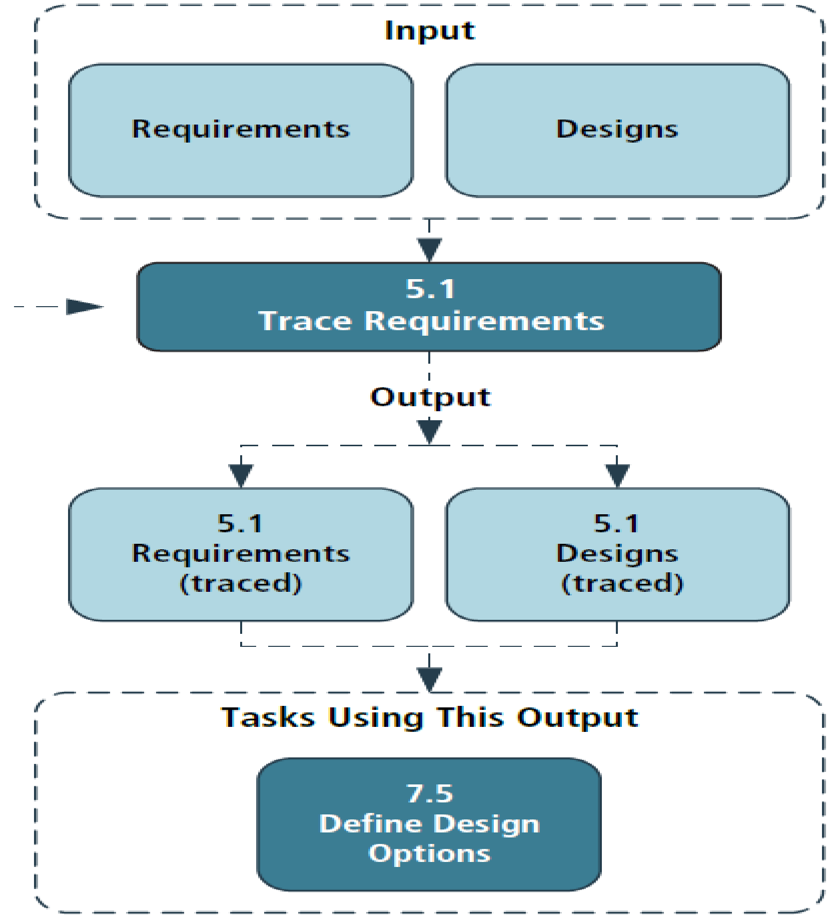
a. Trace Requirements

Example: Software Requirements Traceability



3. Requirements Life Cycle Management

a. Trace Requirements



3. Requirements Life Cycle Management

a. Trace Requirements

Relationships

There are several types of relationships that the business analyst considers when defining the traceability approach:

- **Derive:** relationship between two requirements, used when a requirement is derived from another requirement. This type of relationship is appropriate to link the requirements on different levels of abstraction. For example, a solution requirement derived from a business or a stakeholder requirement.
- **Depends:** relationship between two requirements, used when a requirement depends on another requirement. Types of dependency relationships include:
    - **Necessity:** when it only makes sense to implement a particular requirement if a related requirement is also implemented.
    - **Effort:** when a requirement is easier to implement if a related requirement is also implemented.
- **Satisfy:** relationship between an implementation element and the requirements it is satisfying. For example, the relationship between a functional requirement and a solution component that is implementing it.
- **Validate:** relationship between a requirement and a test case or other element that can determine whether a solution fulfills the requirement.

3. Requirements Life Cycle Management

a. Trace Requirements

Outputs:

- **Requirements (traced) & Designs (traced):** have clearly defined relationships to other requirements, solution components, or releases, phases, or iterations, within a solution scope, such that coverage and the effects of change are clearly identifiable.

3. Requirements Life Cycle Management

B. Maintain Requirements

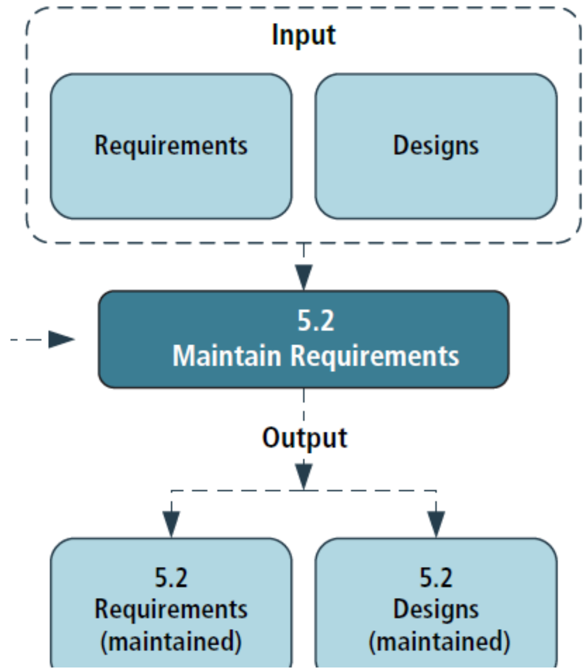
A requirement that represents an ongoing need must be maintained to ensure that it remains valid over time.

In order to maximize the benefits of maintaining and reusing requirements, the requirements should be:

- consistently represented,
- reviewed and approved for maintenance using a standardized process that defines proper access rights and ensures quality, and
- easily accessible and understandable.

3. Requirements Life Cycle Management

B. Maintain Requirements



3. Requirements Life Cycle Management

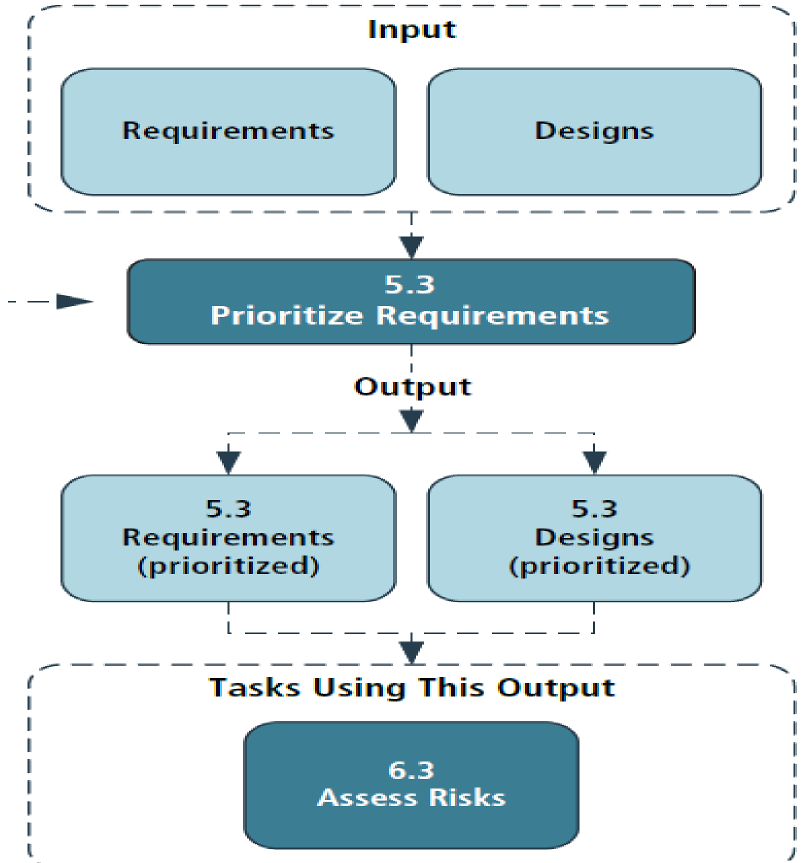
C. Prioritize Requirements

The purpose of Prioritize Requirements is to rank requirements in the order of relative importance.

- Prioritization is the act of ranking requirements to determine their relative importance to stakeholders. When a requirement is prioritized, it is given greater or lesser priority.
- Priority can refer to the relative value of a requirement, or to the sequence in which it will be implemented.
- Prioritization is an ongoing process, with priorities changing as the context changes.
- Inter-dependencies between requirements are identified and may be used as the basis for prioritization.
- Prioritization is a critical exercise that seeks to ensure the maximum value is achieved.

3. Requirements Life Cycle Management

C. Prioritize Requirements



3. Requirements Life Cycle Management

C. Prioritize Requirements

Typical factors that influence prioritization include:

- Benefit
- Penalty
- Cost
- Risk
- Dependencies
- Time Sensitivity
- Stability
- Regulatory or Policy Compliance

3. Requirements Life Cycle Management

D. Assess Requirements Changes

- The purpose of Assess Requirements Changes is to evaluate the implications of proposed changes to requirements and designs.
- The Assess Requirements Changes task is performed as new needs or possible solutions are identified. These may or may not align to the change strategy and/ or solution scope.
- Assessment must be performed to determine whether a proposed change will increase the value of the solution, and if so, what action should be taken.
- Business analysts assess the potential effect of the change to solution value, and whether proposed changes introduce conflicts with other requirements or increase the level of risk.
- Business analysts also ensure each proposed change can be traced back to a need.

3. Requirements Life Cycle Management

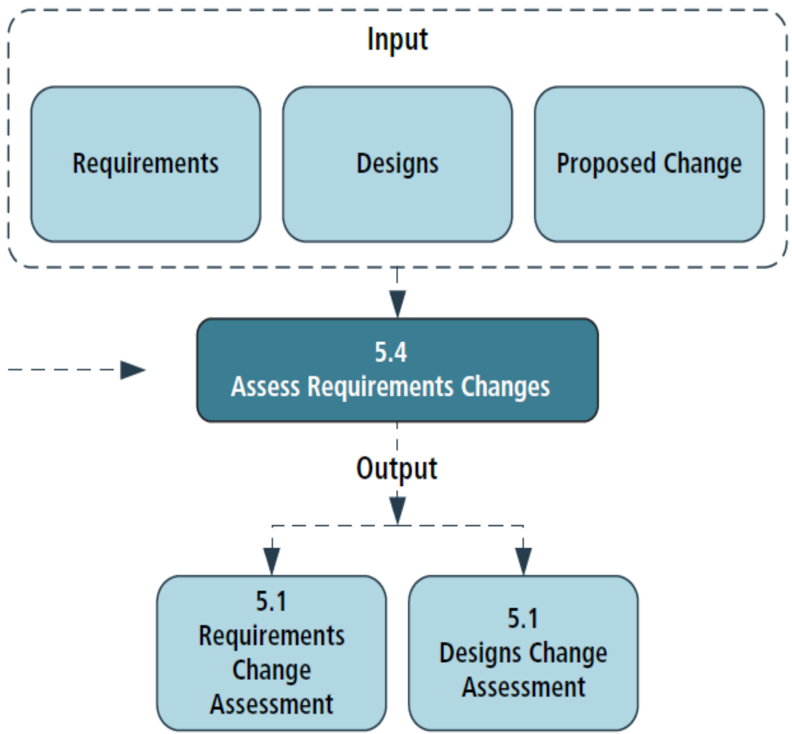
D. Assess Requirements Changes

When assessing changes, business analysts consider if each proposed change:

- aligns with the overall strategy,
- affects value delivered to the business or stakeholder groups,
- impacts the time to deliver or the resources required to deliver the value, and
- alters any risks, opportunities, or constraints associated with the overall initiative.

3. Requirements Life Cycle Management

D. Assess Requirements Changes



3. Requirements Life Cycle Management

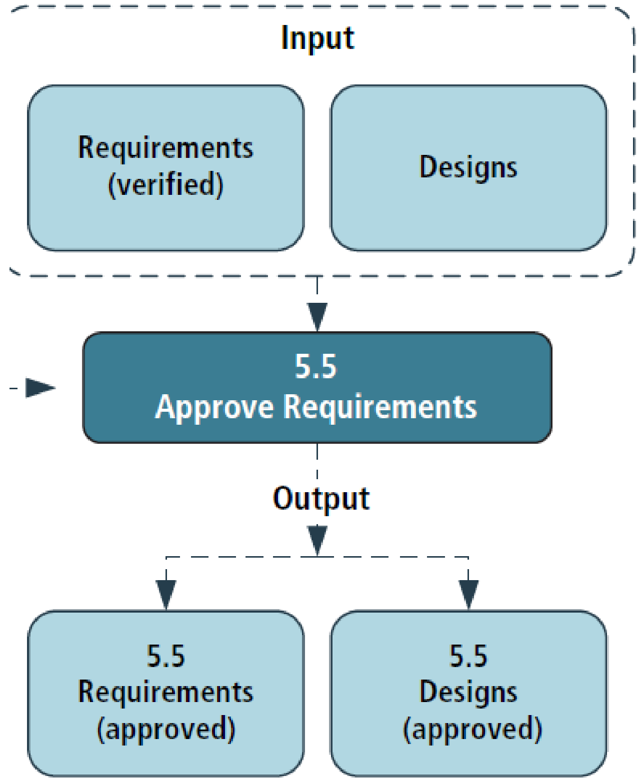
E. Approve Requirements

The purpose of Approve Requirements is to obtain agreement on and approval of requirements and designs for business analysis work to continue and/or solution construction to proceed.

- Business analysts are responsible for ensuring clear communication of requirements, designs, and other business analysis information to the key stakeholders responsible for approving that information.
- Approval of requirements and designs may be formal or informal.
    - Predictive approaches typically perform approvals at the end of the phase or during planned change control meetings.
    - Adaptive approaches typically approve requirements only when construction and implementation of a solution meeting the requirement can begin.
- Business analysts work with key stakeholders to gain consensus on new and changed requirements, communicate the outcome of discussions, and track and manage the approval.

3. Requirements Life Cycle Management

E. Approve Requirements



Thank You
